PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments Abstract is very good, but no conclusion is provided. At the end of the abstract, it should have a conclusion. I think that it is necessary, because I do not know if with 4.34% of dates samples with residues above the maximum residue levels, the food is safe for consumers.	The research work is very good in all aspects. It is necessary research to guarantee safety in imported food. The proposed objectives were met.	
Minor REVISION comments	In materials and methods, the reagent and equipment names should be reviewed, because some are written starting with uppercase and others with lowercase.	
Optional/General comments	Introduction: A good review is made on the subject, and the justification of the work Materials and methods: Very clear and easy to reproduce. Results and discussion: Are well presented and statistically analyzed. Very well discussed and supported with specific references. The bibliographic references are updated. Conclusion: It is good and could be summarized at the end of the abstract.
